SOVELIA

Typical challenges that our customers experience today are related to inefficiency; in product definition, sales- and delivery processes. Poor product quality, long lead times, non-working distributed collaboration, and increased costs are typical indicators of inefficiency. We call these indicators and the result of it; waste. To achieve efficiency in the business processes we need to eliminate the waste.

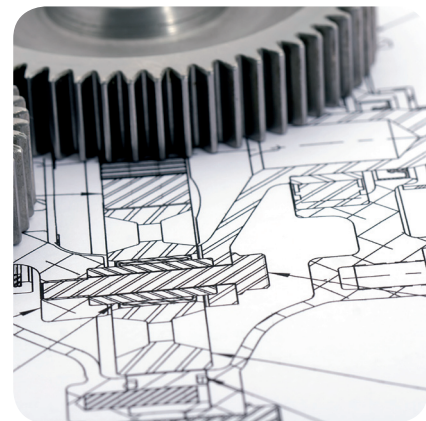

One typical challenge our customers experiences is the gap between Design Information and the Product Definition (complete description of the product). Closing the gap is needed to achieve efficiency in the delivery process. SOVELIA is closing that gap. In the production process, data accuracy and timing is crucial. Product data containing errors or information delays during the production drives unexpected and unnecessary costs. In today's production environment, the costs could be tremendous. Using SOVELIA, an efficient data flow is enabled by providing accurate data, on time, to production and to other systems like ERP system for increased accuracy in forecasting and planning. The waste in terms of faulty data and delays is removed.

SOVELIA helps our customers to overcome challenges and remove waste in order to achieve business benefits like increased productivity and quality, reduced cost, shorter lead times, and increased customer satisfaction.

We call this approach "lean PLM", as we help our customers become lean in their operations. The aim is to enable sustainable business processes throughout the entire product lifecycle, from concept phase to disposal and recycle of a product. We integrate our "lean PLM" solution in customers' core business processes and to existing business critical systems like ERP and CRM. In other words, the use of SOVELIA enables the customers to:

- Improve their data quality in their core business processes
- Enhance their product definition process and product cost optimization
- Ensure the correct timing of the released data – serving right data, in right place, at right time,
- Enable internal and external parties to work based on same plans in the complete delivery chain
- Accomplish easy data distribution in sales and delivery process, ensuring shortened lead times and elimination of errors
- Have an easy and safe way to collaborate with suppliers

Our 20 years of experience in developing and delivering PLM solutions for the SME market, can help our customers to meet their business process development goals without compromises. SOVELIA supports the current and coming needs. Risk taking is minimized with our unique prepackaged implementation approach. We deliver a true PLM solution in production use within 10 weeks with a single price delivery. SOVELIA is safe to own, with system upgrades included in maintenance fee and free viewer licenses which ensures information availability for all user communities. The SOVELIA PLM Template includes all what is needed to become lean – it's 80% preconfigured. Most important - the solution earns itself in no-time.

"Typically lots of time is wasted in the purchase order process sending product data to suppliers and keeping them updated with the latest changes. Now with SOVELIA the supplier gets access to the correct information automatically when they receive the Purchase Order. This means remarkable cost savings and increase of productivity."

Jani Kortelainen, Global Development Manager, Normet Oy
