SOVELIA CORE INTEGRATION

Harmonize processes and handling of data across cloud and on-prem applications

ENABLE INTEGRATION OF ENTERPRISE APPLICATIONS WITH SOVELIA® CORE INTEGRATION TEMPLATE

Sovelia® Core Integration template is a configurable technology that connects various applications, systems, repositories and other business systems for the exchange of data. The business systems can reside on-premise or in cloud.

Sovelia® Core Integration is configurable to meet the needs of various business systems and provides proper scalability for any future ICT system needs and changes in architecture.

SOVELIA® CORE INTEGRATION TEMPLATE ENABLES YOU TO:

- Send and receive product information to your ERP system on-premise or in cloud
- Publish documents into other document repository and content management applications, like SharePoint
- Receive data from other business systems
- Have real-time integration to performance dashboard on selected cloud platforms
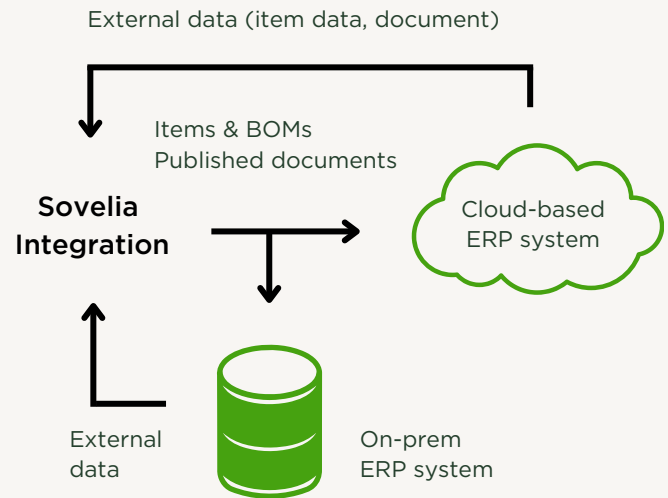

Supported on-premise and cloud applications

- Azure Service Bus
- Azure Blob Storage
- Azure Application Insights
- Microsoft SharePoint
- Other business system

Realtime integration analytics

Application Insights, a feature of Azure, is an extensible Application Performance Management (APM) service. With help of Application Insights ICT team can understand how Sovelia Core Integration is performing and how it's being used.

Use case example

External data (item data, document)

Items & BOMs
Published documents

Sovelia Integration

Cloud-based ERP system

External data

On-prem ERP system

BENEFITS OF SOVELIA® CORE INTEGRATION TEMPLATE:

Ensure that the data across business systems are harmonised and aligned

Share and distribute documents to content management platforms

Save time and eliminate errors in manual data handling

Monitor and track integration service performance
